

Are you interested in getting 20% more generation from your Solar PV system????

The new PV+ from The Renewable Energy Hub keeps you generating for longer meaning a faster return on investment for existing and new systems alike

- Typical return on investment-under 2 years
 - Works with any pv system manufacturer
 - Simple to fit or retrofit
 - Low cost / high carbon benefit
- ... Simplifying pv connection

* savings dependant on individual circumstances and may be higher or lower than those stated.

is pleased to announce the latest product, the PV+

Did you know that... when your PV system is generating at full capacity your inverter could in all likelihood be in over-voltage mode and not generating at all ???

This potential loss in generation could be costing you £££'s

How does the PV+ help?

By monitoring the incoming supply voltage the PV+ unit allows the Solar PV inverter to compliantly stay in circuit longer, preventing nuisance over voltage shut down and keeping you generating for longer. Meaning a faster return of investment for existing and new systems alike.

Additionally, as excessive voltage is given up as heat in electrical appliances, running the PV inverter closer to designed voltage will reduce stresses caused by overheating and potentially help increase its operating life.

Product features

- BS7671 : 2008 Third Amendment
Compliant non combustible metal enclosure*
- G83/2 compliant matrix type tested software
- Lockable mains AC isolator
- Designed and built solely in the UK

*Due to the number of consumer unit fires reported within domestic properties regulation 421.1.201 has been added to BS 7671: 2008, which requires consumer units and similar switchgear to have their enclosures manufactured from non combustible material or to be enclosed in a cabinet constructed from non combustible material.
